

La-Pha-Pack Micro-Vials with integrated Micro-Insert "Base Bonded"

Vials with integrated Micro-Insert (Glass-in-Glass) as modern sample containers for Microsampling

La-Pha-Pack "Base Bonded" Micro-Vials are a cost-effective alternative to the "Top Bonded" Micro-Vials.

- Important safety aspects with Micro-Vials are risk-free injection of the needle. Centering of the Micro-Insert for safe injection of the needle is guaranteed right by the design.
- · Safe handling during filling as well as excellent sealing of the sample container
- Residual volume < 2µl for valuable samples
- Comprehensive autosampler compatibility because of the flat glass bottom and "standard" vial design (no need for an adapter).
- Available as Short Thread ND9 or Snap Ring/Crimp ND11 vials.

Ordering information
